A Casey Research Investment Bulletin

After spending countless hours analyzing hundreds of exploration companies from around the world, the Casey Research Energy Team has uncovered...

The 5 Must-Own Energy Stocks for 2011

Our analysts believe these stocks will richly reward early investors, and for the next 72 hours you can get a *FREE* special report that reveals all five – and the exhaustive research behind each selection.

**This short letter from the Casey Energy Team
has all the details...**

Dear Serious Investor,

Wouldn't it be great if you could turn back the clock to the year 2000 and invest in gold?

Obviously you can't, but you can do the next best thing – get positioned in

energy *now*.

Energy is the new gold. It's where gold was in 2000 – unloved by investors, underappreciated by Wall Street, and primed for stunning profits. Buy energy stocks with the “right stuff” and you can ride them to consistent gains that we believe will last for years.

But this isn't a ride for the faint of heart. Volatility is the name of the game here, so if you're to reap maximum gains, you can't panic every time prices drop. And – as with gold – prices *will* drop from time to time in energy stocks (especially when oil drops suddenly).

That's why so many investors shun the energy complex – they don't have the guts to ride out the turbulence.

This all-too-common tendency is the main reason you now have a rare opportunity for historic profits in energy (as you know, the *real* money in any sector is made by striking when everyone else is afraid – that's how Warren Buffett, George Soros, T. Boone Pickens, and many other investment legends made their billions).

How We Find Winning Energy Companies

It's all a matter of asking simple questions – but while the questions are simple, getting the answers is anything but.

You have to find out if the company's people are true leaders with connections and a track record of making money. You need to know if their projects hold promise – you can't just take their press releases at face value.

You also need to determine if a company has the cash – or access to adequate financing – to move its business plan forward.

Getting the answers to these and other vital questions is what we do – day in, day out.

To uncover the few investment-worthy energy stocks out there, we put hundreds of companies from around the world under the microscope, searching for hidden indicators that tip us off to under-the-radar profit opportunities that elude most analysts.

That's how we found the five energy stocks I mentioned earlier...

A Rundown of 5 “Must-Have” Energy Stocks for Your Portfolio

Investing in these companies now – before the masses get wind of them – is the single best way to position yourself for the outstanding energy sector profits that we're convinced are right around the corner.

Let me tell you a little about these outstanding opportunities...

Stock #1:

This is a brand-new junior explorer that's taking state-of-the-art drilling and exploration techniques to emerging areas with substantial oil and gas reserves (the great thing about this company is, it's also got oil- and gas-producing properties in North Africa, the Middle East, Canada, and Romania).

Stock #2:

Here's an outfit that owns no properties – instead it funds junior energy explorers in exchange for a cut of the action at a fixed price (a great strategy that lowers risk because the company isn't affected by production cost increases or capital expenditures).

Stock #3:

This Canadian small-cap has a proven record of finding oil and gas deposits... and right now it's actually trading below

the cash value of its bank account! And one of its major investors is Rick Rule, a legend who has administered over US\$1 billion in assets for his clients (when he takes a major position, we take notice).

Stock #4:

Thanks to this large-cap explorer, countries like the U.S., China, and Japan are accessing oil from underexplored regions unhindered by shaky regimes. And because of this company's size, it carries less risk than a lot of natural resource explorers – yet has substantial upside.

Stock #5:

Our fifth pick is an outfit primed to take advantage of the boom in green energy. It's involved in solar, geothermal, and run-of-river hydropower, giving it a toehold in the three most important facets of alternative energy.

How to Get These 5 Energy Stock Picks for Free

You'll find these picks in our new report, *The Five Must-Own Energy Stocks for 2011*, along with the methodology of how we culled these jewels from the mountain of other companies that didn't make the grade.

All you have to do to get this report is take our monthly energy advisory service – *Casey Energy Report* – for a three-month test-drive.

And don't worry – you risk nothing by taking us up on this offer. If you decide it isn't for you during those three months, you can cancel your subscription for a full refund (and you can keep *The Five Must-Own Energy Stocks for 2011*, with our compliments).

Casey Energy Report features straightforward, no-nonsense advice on energy sector investing, along with the best small-cap stock recommendations.

These recommendations are the result of exhaustive research and in-depth

analysis by Casey Research Chief Energy Strategist Marin Katusa, who leads our team of energy experts.

You may well have seen Marin on television – he’s been interviewed by CNN, CNBC, and nearly every other financial network (when he talks about energy investing, the smart money listens).

Marin spends over 300 days a year scouring the globe to find the best energy-sector investments. During his travels, he meets with government officials, geologists, and CEOs. He asks them tough questions to determine whether the companies he’s visiting are worthy of recommending to **Casey Energy Report** subscribers.

Here’s What You Get in Every Issue of Casey Energy Report

Each issue features up-and-coming small-caps ripe to double or triple your investment within a year. Here’s a taste of three current recommendations (through April 21, 2011):

- An oil exploration company focusing on African properties – up 70.9% in just over 10 months
- A junior uranium company with multiple projects in Canada – up 45.3% in 1 year
- A uranium producer with a diversified portfolio of properties in North America, China, and Africa – up 129% in just over 2 years

But **Casey Energy Report** is more than just stock picks. You also get...

- A special feature that deals with important energy topics
- Monthly examinations of energy-based commodities including oil, natural gas, coal, and uranium
- The latest developments in the world of green energy, including run-of-river hydro, solar, and geothermal power
- Detailed quarterly updates of all of our recommended companies

- Online access to valuable archives
- Access to Casey Research's members-only website, where you'll find a resource directory, our "Knowledge Base," and special reports on investment strategies
- **PLUS...** a complimentary subscription to ***Casey Energy Opportunities***, our monthly newsletter focusing on outstanding mid- and large-cap energy companies (a \$79 value)

Save 50% Off Our Regular Rate
